Rough draft trans. of Moscow U. Vestnik. Seriya Matematiki, Mekhaniki, Astronomii, Fiziki, Khimii (USSR) 1958 [v. 13] no. 4, p. 37-44.

A number of non-eclipse spectra of the chromosphere, including numerous emission lines, were obtained in 1956-57 on the tower solar telescope at the Crimean Astrophysical Observatory of the Academy of Sciences, USSR. The results of processing a part of the material, concerning only the first four lines of the Balmer series of hydrogen, H_{α} , H_{β} , H_{γ} , and H_{δ} , are noted. The results indicate that the photospheric radiation, re-emitted as a result of resonance scattering, is far too insufficient for the excitation of hydrogen in the (Astronomy--Astrophysics, TT, v. 5, no. 11) (over)
